Today weâ€™re going to take a look at Tkinter! I was curious about how one would go about hiding a frame and then re-showing it using Tkinter and I kept finding threads (like this one) that talked about using withdraw() and deiconify() but didnâ€™t really provide any usable code. In wxPython, I did this sort of thing using pubsub. Weâ€™ll go over three different versions of how to hide and show ...

Redacting a PDF file allows you to hide sensitive information while otherwise keeping your document's formatting. Redaction can and should be used to cover private information, such as Social Security Numbers, competitive information, and even images. In a properly redacted file, formatting elements remain unchanged, while classified information appears as a black box.
