Vocal communication of emotion: A review of research ...

Mania, also known as manic syndrome, is a state of abnormally elevated arousal, affect, and energy level, or "a state of heightened overall activation with enhanced affective expression together with lability of affect." Although mania is often conceived as a "mirror image" to depression, the heightened mood can be either euphoric or irritable; indeed, as the mania intensifies, irritability ...

Neurochemistry is the study of chemicals, including neurotransmitters and other molecules such as psychopharmaceuticals and neuropeptides, that influence the function of neurons. This field within neuroscience examines how neurochemicals influence the operation of neurons, synapses, and neural networks. Neurochemists analyze the biochemistry and molecular biology of organic compounds in the ...

Light is a potent stimulus for regulating circadian, hormonal, and behavioral systems. In addition, light therapy is effective for certain affective disorders, sleep problems, and circadian rhythm disruption.

Measuring and using light in the melanopsin age ...

However, the BOLD signal is not related to a specific neurotransmitter system. Hence, we performed PET imaging with the radiolabeled D2-receptor antagonist [¹¹C]raclopride to investigate dopamine release with the same gustometer setup providing either milkshake or tasteless solution on separate testing days.
